c) Market risk

Market risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises interest rate risk, currency risk and price risk.

(i) Interest rate risk

Interest rate risk is the risk that future cash flows of a financial instrument (asset or liability) will fluctuate because of changes in market interest rates. The Board is not exposed to interest rate risk as it does not hold any investments or debt.

(ii) Currency risk

Currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates. The Board is exposed to currency risk through purchases of goods and services using foreign currency. The Board mitigates this risk through cash flow monitoring of operational needs, and purchasing foreign currency only as needed to settle financial liabilities.

(iii) Price risk

Price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk). The Board mitigates price risk through fixed pricing procurement contracts.

12. Comparative Figures

Certain comparative information has been reclassified to the financial presentation adopted in the current year.
